

# Machine Learning

Code / der / algorithm

Examples

- ① easy to understand
- ② Helps in remember

⇒ ML is a methodology through which we want our machine to learn.

⇒ experiences ⇒ past experience  
↓  
past record  
past data

Machine basically learn hidden pattern or insights or trends from the past data.

⇒ to predict upcoming event

Above is very analogous to how  
we human learn.

2 2r

① Road Crossing

② Touching hot pan

③ Jumping from a long height

Industry	⇒	Holdroom	swaggy	
		Business	A	
		NBA	Youtube	

enough past data ⇒ try to predict  
future

DS  $\Rightarrow$  organizing, collecting & analysing

$\Rightarrow$  this can be the strongest

all is DS

ML  $\Rightarrow$  Ind vs Can

tomorrow's match data

AI

DS

ML

⇒ Google search

⇒ Instagram algo

⇒ Amazon/recomm  
Netflix

Everything should make business sense

① Steps to save earth  $\Rightarrow$  kill all human beings

② Chat bot giving some answer

# Machine Learning

Supervised

$\Rightarrow$  predict      a class or a value  
                         $\downarrow$                           $\downarrow$   
                        iris                         housing  
                        virginica                         cost of house

Classification      regression

$\Rightarrow$  we have exact data & exact what happened.

$\Rightarrow$  new data point  $\Rightarrow$  predict

## Unsupervised ML

⇒ not clearly marked with labels/class  
& no target variable

⇒ self guided learning algorithm

# Reinforcement Learning
